Sealund Partners with DTCC to Create Interactive Learning Courses

The Depository Trust & Clearing Corporation (DTCC) selected Sealund to create five Interactive Learning Courses available online for its participants. One of the requirements for this training initiative was a quick turn around time. Sealund had to meet the challenge of completing all five courses in under four months!

Interactive Exercises and Animations

Sealund's Instructional Design and Creative departments worked closely together to design graphics, interactive exercises and animations that were dynamic as well as intuitive. Throughout the design process, Sealund strived to create courses that were inventive and engaging, while ensuring that the "look and feel" remained consistent with previous courses developed by DTCC.

Detailed Storyboarding

Sealund began the design and development phase by creating storyboards for each of the five courses. The storyboards included all course content as well as detailed descriptions for graphics, interactions and animations. The storyboards provided DTCC with a high-level view of what their end product would be and provided them with an opportunity to offer feedback and suggestions.

Learning Management System

Sealund Animators developed interactive exercises and animations using Flash by Macromedia. All five courses were programmed by Sealund's Technical Team using Vuepoint's Content Creator and deployed via Vuepoint's Learning Management System (LMS).
